As Kılıç Deniz is aware of our responsibilities towards the environment and society, believes in continuous development, prioritizes quality in its products and services, and is one of the leading companies in terms of technology and quality, our policy towards the environment is:

- To minimize the pollution and damage we can cause to the environment by keeping the factors that may cause environmental pollution under control and using the best possible technologies and environmentally friendly processes.
- To calculate greenhouse gas emissions and carry out reduction studies in order to contribute to the fight against climate change.
- To accept compliance with all laws and regulations related to the environment as a minimum competence and to continuously improve and regularly monitor compliance with legal requirements.
- To share our environmental awareness and environmental protection efforts with our employees, customers, suppliers and society; to organize training and awareness programs to increase environmental awareness.
- Responsibly manage the supply chain, monitor and supervise feed procurement processes to prevent deforestation
- To continuously monitor and control emissions, wastewater and other pollutants arising from our activities; To implement risk management plans by considering community health and safety.
- To reduce our waste at its source, to collect it separately and to direct it to recycling, to ensure the sustainable use of resources by reducing the consumption of natural resources.
- To increase resource efficiency in packaging and packaging processes, promote recycling and reduce waste.
- Protecting aquatic ecosystems, biodiversity and marine resources; assessing and minimizing the impacts of aquaculture activities on marine and coastal ecosystems.
- It aims to use resources effectively and sustainably in water and wastewater management, to keep the environmental impacts of wastewater under control, to comply with the relevant legislation and permitted limit values, and to prevent pollution.
- To optimize energy and water consumption for the protection of natural resources, to adopt sustainable use approaches.
- To improve our environmental performance by regularly evaluating the environmental impacts of our facility and ensuring the participation of our stakeholders.

It is our duty to fulfill our responsibilities towards today's people and future generations, to act with the awareness of environmental protection and to spread this awareness. We are committed to being a company that acts with the understanding of continuous improvement by combining environmental protection, product quality and activities to prevent unnecessary resource use.
